Datum/Date: May 26th, 2009

TO WHOM IT MAY CONCERN

Please be advised that DYNAenergetics has been informed by their competent authority and major freight forwarders that effective immediately a new UN directive is in effect concerning the transport of 1.4S classified product on passenger air craft. This new directive applies to explosives with the following UN numbers:

- UN0323: Cartridges, power device
- UN0366: Detonators for ammunition (not applicable for DYNAenergetics)
- UN0441: Charges, shaped
- UN0445: Charges, explosive, commercial (not applicable for DYNAenergetics)
- UN0455: Detonators, non-electric (not applicable for DYNAenergetics)
- UN0456: Detonators, electric
- UN0460: Charges, bursting, plastics bonded (not applicable for DYNAenergetics)
- UN0500: Detonator assemblies, non electric (not applicable for DYNAenergetics)

The goods will have to be labelled with a "Cargo Aircraft only" sign and will only be allowed to be shipped by cargo air craft.

In order to get a new 1.4S classification for transport of these goods by passenger air plane a new 6(d) test will have to be conducted. This test has to demonstrate that any hazardous effects arising from an explosion of one of the explosive devices inside the package is confined within the package.

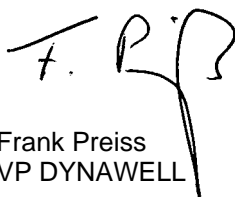

Our R&D division is in the process of engineering a new package for the shaped charges. First discussions with the German notified body have been held in May.

Further we have been informed by the German notified body that the DYNAenergetics 1.4S package for detonators has passed the new 6(d) test. We are presently waiting on the certification to submit to the freight forwarders.

In any case DYNAenergetics will find a solution to get your product to the desired location.

In case of any questions please do not hesitate to contact your nearest DYNAenergetics representative.

With best regards

Frank Preiss
