

**Standard Helical
Perforating System**

DS Infinity™

DS Infinity features a helical charge pattern, and is customizable for charge type, size, quantity and phasing, providing a nearly infinite range of design options. The truly modular perforating system is among the shortest available on the market today, and simplifies supply chain, increases wellsite efficiency and delivers more shots per foot than competitive systems.

INCREASED FLEXIBILITY WITH SIMPLIFIED DESIGN

DS Infinity, the original Factory-Assembled, Performance-Assured perforating system, minimizes on-site assembly, configuration, and testing. Each system is assembled and tested by certified technicians at DynaEnergetics' ISO 9001-compliant facilities and delivered to the wellsite ready for deployment. Just insert the Plug and Go™ detonator, test the system, and run downhole.

DS Infinity reduces overall gun length, without jeopardizing mechanical integrity. This provides engineers more flexibility when designing perforating programs. The length-optimized design accommodates more guns in a shorter string increasing the number of clusters per stage.

UNMATCHED SAFETY

The DS Infinity system is armed with the patented IS2™ TopFire Intrinsically Safe™ Initiating System, allowing uninterrupted wellsite operations. Maintaining radio silence at the wellsite is not required and transportation is made safer as the detonators are shipped separately from the system's gun modules.

Arming the DS Infinity system in the field is as easy as installing a battery in a flashlight. There are no wires to connect, eliminating a common point of failure. Less risk of human error, reduced chance of misfire and improved downhole reliability.

REDUCED DOWNTIME

Wellsite assembly and testing procedures are straightforward and efficient while the modular design of DS Infinity allows each perforating system, and the entire perforating string to be tested prior to deployment. Timely assembly and proven reliability result in reduced downtime, allowing for more fracturing stages to be completed each day.

Delivered directly to the wellsite, DynaEnergetics' solutions eliminate the need for gun assembly personnel and local infrastructure.

DS Infinity guns are 100% disposable. Once the perforating job is complete, the internals from initiated guns are easily removed leaving a clear barrel for recycling and eliminating redress.
